

Supporting materials for the paper:

Exploring Development Methodologies for Reactive Synthesis Specifications

The supporting materials include the following:

File	Description
Protocol.pdf	A complete protocol of the case study, with the task definitions and full guidelines introduced to participants
Consent to Participate in Study.pdf	The consent on which all participants signed
Different Development Methodologies of Temporal Specifications.pdf	The original slides we presented to participants on the methodologies
Final Versions.zip	The final 44 specifications, each specification is named with a unique ID
Final Version Mapping.csv	A mapping between the random spec IDs to task\team\methodology + reports on synthesis running times
Expert Review.pdf	The expert reviews of the specifications
All Logs.zip	The raw data of all the Spectra logs collected. Each log is annotated with a unique ID, accompanied by a Spectra file from the exact moment of the log with the same unique ID.
Methodologies Example.zip	A folder containing a complete description of the example from Sec. 2.2 and implementation of it using the two development methodologies

* Upon acceptance of the paper, we plan to make all the logs collected and their analysis code accessible as part of an artifact.
